

Videography Plan – Gambia Charity (Water, Food, School)

Overview

This plan will guide the videographer in capturing video content for the Water, Food, and School charity project.

Each of the three areas (Water, Food, School) will have its own dedicated video, but all will follow a consistent filming style and approach.

General Guidelines

- Locations:
 - Record at 3 different houses (each covering water, food, and school aspects).
 - Capture footage in surrounding villages and schools.
- Filming Style & Techniques:
 - Use a mix of wide shots, close-ups, and 360° pans.
 - Move the camera slowly and steadily.
 - Give focus to details (take time on each subject).
 - Keep talking to a minimum; let the visuals speak.
 - When talking is included, match the visuals with the narration (if someone mentions water, show water).
 - Continue filming the environment even while someone is speaking.
- Collaboration:
 - If the videographer makes a mistake, feedback will be given for correction.
 - Both your ideas and the videographer's ideas should be combined.
- Timeframe:
 - Filming one full house: max 40 minutes.
 - Entire walk-through and village coverage: 5–6 hours (before Maghrib).
 - Aim for 1+ hour of main footage (50–80% more than previous recordings).
 - Record an additional 1 hour of “extra” footage: walking, explanations, environment, details for editing flexibility.

Water

- Begin by entering the house (after permission).
- Show around the house while explaining the water situation.
- Capture:
 - Water storage (buckets, jerry cans, kitchen utensils).
 - The kitchen area and water-related tools.
 - The distance to the water source (walk and show).
- Interview: how water is collected, how heavy it is, how many trips per day, where it is stored.
- Hygiene and safety: is the water clean, safe, covered?
- Cost: does water require money to obtain?
- Show activities requiring water (cooking, washing utensils, laundry).
- Highlight shortages, struggles, and needs.

Food

- Similar approach to water, but focused on food.
- Capture:
- Kitchen space.
- Cooking utensils and food supplies.
- Pots, pans, storage containers.
- Current food available (or shortages).
- Meal preparation process.
- The struggles: not enough food, poor kitchen conditions, lack of resources.

School

- Capture:
- The distance children walk to school.
- Walk-through of the school environment.
- Classrooms, seating, and learning materials.
- Students during a regular day.
- Teachers and facilities.
- Explain and show the struggles: overcrowding, missing materials, broken infrastructure.

Village Walkthrough

- Walk into the village, showing:
- The general environment (360° view).
- Living standards and housing conditions.
- Water system (if available).
- Infrastructure and surroundings.
- The overall situation of the community.

Output

- Main Video (per house): ~40 minutes.
- Main Footage (per area): at least 1 hour.
- Extra Footage: 1 hour of walking, explaining, and extra angles.
- Final deliverables: 3 main videos (Water, Food, School), plus additional editing material.
